DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Tomita (U. S. PAT. 5,936,429).

In claim 1, Tomita teaches all claimed features in Fig. 10, an asynchronous pulse logic circuit comprising: a first pulse generating component (20) for generating a sending pulse (S2); and a first converting component (24-30) for converting pulses (S1, S2) to a first level voltage (S5) connected to said first pulse generating component (20).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tomita in view of Ganesan (U. S. PAT. 6,433,601).

In claim 9, Tomita teaches all claimed features of claim 1; with the exception of teaching wherein said first converting component is modified to store states. However, Ganesan teaches in Figs. 6-9, a pulsed D-Flip-Flop having cross-coupled inverters (420) to store logic states.

Therefore; it would have been obvious to one ordinary skill in the art at the time of the invention was made to modify the circuit of Tomita to store logic states as taught by Ganesan to enhance the switching speed.

5. Claims 2-8 and 10-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
